Select the table to get the data

Select Table

Write Your Sql Query(you can use url variable to make dynamic query, for user use {userid})

SELECT DISTINCT(submission_data_value) FROM k84ev_jsn_uniform_submission_data WHERE submission_data_value='Hombre' OR submission_data_value='Mujer';

You can also include dynamic variables in your SQL query. You just need to enter variable name within curly braces. e.g. {catid}. {loggedinuserid} is reserved for Logged-in User

- We will consider the first column for Horizontal value.
- After that all column will be consider as series.

Axes Parameters

Add Series

Series Name(*)

Sexo

Series Color

#003b94

Select Color

Column name for Series(*)

submission_id

Horizontal Value(*)

Mujer,Hombre

string
